

# Troubleshooting on tanks

## w/9500 multi

Error	Possible cause
System cuts out on low pressure	Refrigerant shortage – defect in cooling circuitry
System cuts out on high pressure	Fan does not run – dirty condenser
System does not stop at set temperature	Manual contact active – error in control
Agitator runs continuously	Manual contact active – error in control
Agitator does not turn	Temp. Over 20 degrees – fiber wheel in motor -relay
Agitator does not run in ON-OFF poss.	Error in control
Warm up time out	Defect heater – contactor
Warm water low	Not sufficient water
No water supply	Control of water supply – solenoid valve
Flowmeter	Pulses from flowmeter
Error on temperature sensor	Sensor defect
Cooling temperature not kept	Check of pre-cooling – cooling system
Wash temperature not kept	Not enough hot water
Relay – spray pump	Relay disconnected – control of fuses
Relay – agitator	Relay disconnected – control of fuses
KP1 – high pressure fault	No pump down by washing
Control of detergent	No chemicals – defect dosage pump
Check of disinfection	No chemicals – defect dosage pump
Agitator sensor 1	No signal from agitator
Agitator sensor 2	No signal from agitator
Agitator sensor 3	No signal from agitator
